Experiment 1&2 : Footprinting on the Target Network

Aim: To perform passive footprinting on a target network using search engines, web services, and social networking sites to gather publicly available information.

Procedure

1. Choose an authorized target (e.g., your college website or a lab domain).
2. Open Google and search: site:example.com to list indexed pages.
3. Search for documents using: site:example.com filetype:pdf.
4. Search for login pages using: site:example.com inurl:login.
5. Perform a WHOIS lookup to identify domain registration details.
6. Use a DNS lookup service (domain tools) to view A, MX, NS, and TXT records.
7. Use an IP lookup service to obtain IP location and ISP details.
8. Use BuiltWith (or a similar service) to identify the technologies used by the website.
9. Use crt.sh to identify publicly known subdomains from SSL certificates.
10. Search LinkedIn and other social networking sites for publicly available organizational information.
11. Record all collected information in an observation table.

Sample Output

Information	Sample Result
Target Domain	rajalakshmi.org
Indexed Pages	Home, Admissions, Research, Placements
PDF Files	R2023-CSE-CS-Curriculum_and_Syllabus.pdf
WHOIS	Registrar: Register.com - Network Solutions, LLC Created: 2003
DNS Records	A Record: 192.64.115.115 TXT: "google-site-verification=RJmRqsR8gFpjfLLFbgbFSlRApmpZClOTOjKFCA_4o6Y" NS: 162.159.24.117
Technologies	Next.js, Intersection Observer, React
Subdomains	Hostel.rajalakshmi.org, students.rajalakshmi.org
Social Media	Rajalakshmi Engineering College, Benedict J N

Result

The target network was successfully footprinted using publicly available search engines, web services, and social networking sites. Information such as domain details, DNS records, technologies, and public organizational information was collected without directly interacting with the target systems.
